

# Frogger (Arcade)

*Rendered on June 10, 2025*

---

Despite the dust and wood-veneer the arcade version actually cleaned up okay on the inside. It looked much worse with the vsync off track but its playable on its own. Sound seems to be disabled inside? Should fix and the display circuitry is slightly glitchy.

Installed a freeplay mod.

Board should probably be looked over, the pixel shifting in the screen is likely more PSU jitter. Every big cap on these machines are flakey

Frogger gave up, looks like PSU failure. Luckily we ordered the kit for it yay.

Will be disabled for thurs.
